

LogiFlow

Your LR book, POD and freight bill — in one place, in one minute.

Dispatch software for Indian FTL transporters running 5 to 60 trucks. Drivers need only WhatsApp. Customers stop calling. You bill the same day the truck is unloaded.

THE PROBLEM

The money is stuck in the paperwork, not the trucking.

A transporter running 20 trucks does everything right operationally and still waits two months to be paid — because the document that proves delivery travels back in a driver's shirt pocket.

7–20 days

for a signed POD to reach the office

60–90 days

actual receivable cycle, against 30 contracted

19,000 Cr

of freight receivables stuck industry-wide in the POD-to-invoice gap

Today that runs on a paper LR book, one WhatsApp group per truck, and a Tally operator who invoices when the paper finally arrives.

WHAT LOGIFLOW IS

Three documents. Nothing else.

Not an ERP. Not accounting. Just the three pieces of paper that move money — done properly, and done in the order your office already works.

01 · LORRY RECEIPT

Compliant, in under a minute

Auto-numbered and gapless. E-way bill on the slip. Four copies. The GST line is whatever your CA says it is — including no GST line at all.

02 · PROOF OF DELIVERY

Photographed at the gate

The driver taps a WhatsApp link. No app, no login, no training. It works with no signal and sends itself when the network returns.

03 · FREIGHT BILL

The same afternoon

A verified POD makes the trip billable. One click raises the bill for one LR or twenty, as a PDF and as a Tally-ready CSV.

THE OFFICE

Every truck, on one screen

Trips by state, what is stuck, and what is owed. The board moves on its own as drivers report — nobody refreshes anything. The panel on the right is the day's actual exceptions: trips gone quiet, PODs nobody has checked, an e-way bill expiring tonight.

CREATING A LORRY RECEIPT

Under 60 seconds, and the number cannot repeat

Type three letters and the party appears with its GSTIN. The panel on the right is the LR exactly as it will print, updating as you type. Numbers are gapless per branch per financial year — and a cancelled LR keeps its number forever, the way your book already works.

No app. One button. Works with no signal.

He already has WhatsApp

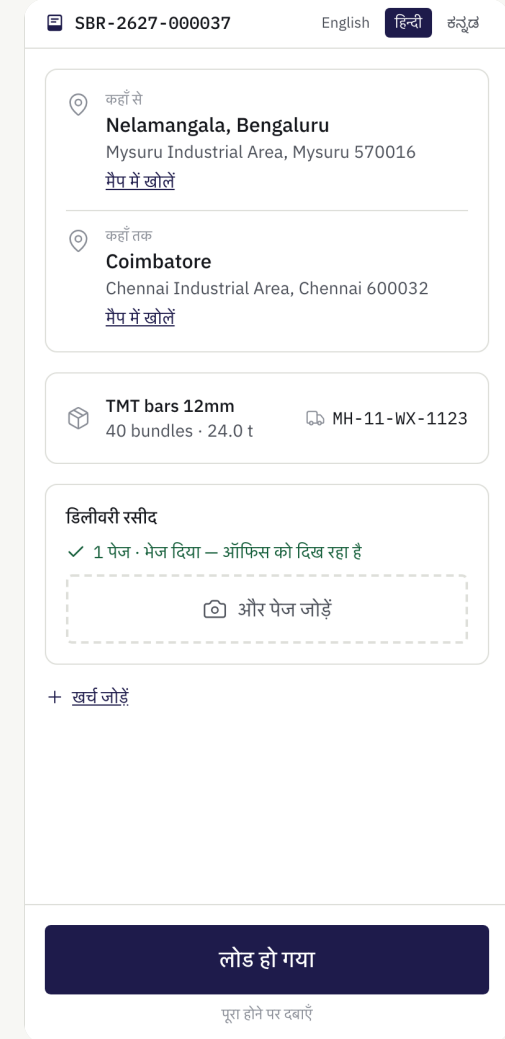

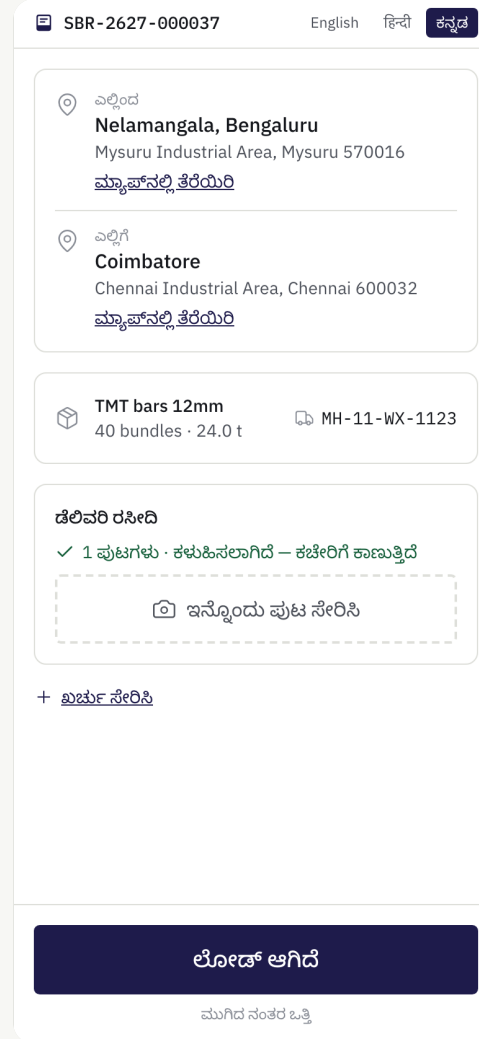

You tap Send to driver; he taps the link. Nothing to install, nothing to remember.

In his language, automatically

Hindi or Kannada from his driver record. He never finds a setting.

Saved on the phone when there is no network

At a plant gate with no signal, the POD is stored and sends itself later. He never sees an error.

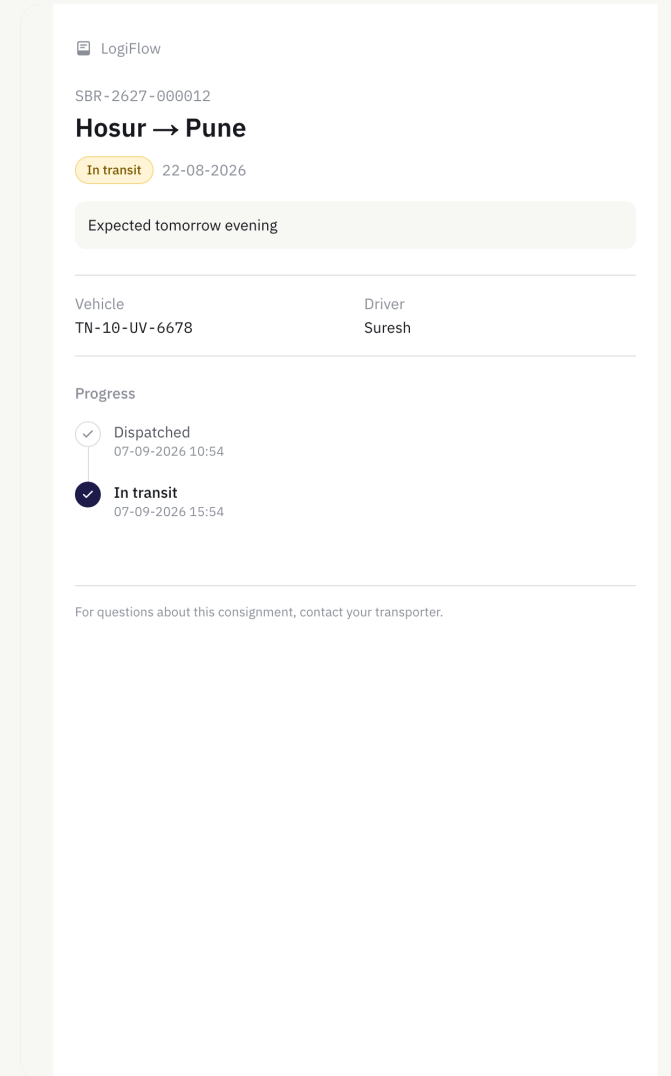

YOUR CUSTOMER

They stop calling the office.

One link, sent on WhatsApp. It opens instantly on any phone, works even with JavaScript disabled, and shows the milestones, the truck number, the driver's first name and the signed POD.

What it never shows

Your freight. Your advance. Anyone's GSTIN or phone number. Your consignee can forward this link to whoever they like — it gives nothing away.

THE REGISTER

Your LR book, searchable

Every consignment you have ever issued, filterable by state, date, party or truck, and exportable. The number, the route, the freight and the status — the same columns as the book, except you can find things in it.

+ New LR

ONE CONSIGNMENT

Everything about a trip, in one place

Both parties as they were when the LR was signed, the cargo, the e-way bill, the full event trail with times, the signed POD, and the money — including what the driver spent and what he is owed. Nothing here has to be reconstructed from a WhatsApp group.

THE FLEET

The document that expires mid-trip

Fitness, insurance, permit, PUC and RC for every truck, flagged at thirty days and again inside fifteen. A truck stopped at a checkpost for an expired fitness certificate costs more than a month of this software.

Not a global tool with a rupee sign added.

RCM, 5% or 18% — set once

Most fleets under twenty trucks are on reverse charge, and the LR then prints the statutory note with no GST line at all. Change the mode and every new document follows; every old one prints exactly as it was signed.

E-way bill on the slip

Number, validity and distance captured with the LR, so the driver hands the checkpost one piece of paper.

Hindi and Kannada on the driver's screen

Chosen from his record, not from a menu. Adding a language is a file, not a release.

Built for a bad network

PODs are compressed on the phone and queued. A trip recorded with no signal is not a trip lost.

Gapless LR numbering per branch per financial year, immutable event history on every status change, and a tracking link that cannot leak commercial data — because these are the things a CA and a customer will each test in the first ten minutes.

WHERE THIS SITS

The first software a transporter adopts.

The real competitor is not another product. It is the paper book, the WhatsApp group and the Tally operator — which are free, familiar, and work.

Enterprise shipper TMS	Fretron, Shipy, FarEye	Sold to the manufacturer, not the transporter. Six-week implementations.
Transporter ERP	Fleetable, Fleetx, LogiBrisk	Full accounting and hire slips. Powerful, and far more than a 10-truck fleet will ever switch to.
Marketplaces	BlackBuck, Vahak, Porter	Finding loads. A different problem entirely.
Paper + WhatsApp + Tally	What you use today	Free and familiar. This is what LogiFlow has to beat, and the only thing it tries to replace.

WHAT CHANGES IN THIRTY DAYS

The numbers we will hold ourselves to.

~~5-8 min~~

< 60 sec

to write a lorry receipt

~~7-20 days~~

< 24 hrs

for the POD to reach the office

~~10-25 days~~

≤ 2 days

from delivery to invoice

~~15-30 / day~~

≤ 10 / day

"where is my truck" calls

Measured on your own dispatches, not ours. If the POD number does not move, the pilot has failed and you owe nothing.

THE OFFER

Thirty days free, for the first five fleets.

We set it up, not you

Your parties, trucks and drivers imported. Your LR layout matched to the book you already print. Two training sessions for whoever writes them.

One branch, unlimited lorry receipts

No per-LR fee, then or later. Nobody should hesitate to dispatch because the software charges by the document.

Print the office copy for the first month

Keep the paper trail running in parallel until you trust it. We expect you to.

AFTER THE PILOT

₹,000–6,000

per branch per month, tiered by fleet size (≤ 15 / ≤ 40 / ≤ 100 trucks). No per-LR fees.

One-time onboarding ₹10,000 — master data import, LR template match, training.

TO START

Three things, and we can run your first real load this week.

Your GSTIN

and the tax mode your CA uses — reverse charge, 5% or 18%

One filled page

from your LR book, so the printed copy matches what you already issue

Your lists

trucks with document expiry dates, drivers with mobile numbers, top twenty parties

LogiFlow Bengaluru, Karnataka
